Ahmad Hassan

React Native & React Developer

ahmadhassanchadhar11@gmail.com +92 371 144 9470 LinkedIn GitHub Islamabad, Pakistan

Results-driven software engineering graduate with hands-on industry experience shipping 8+ production applications used by 2,000+ active users across iOS and Android. Proficient in React Native, React, TypeScript, Firebase, REST APIs, WebSockets, and third-party SDK integrations including RevenueCat, Pusher, and OpenAI. Experienced across the full mobile development lifecycle from architecture and UI/UX implementation through App Store and Google Play deployment and live maintenance. Comfortable leading frontend work in agile teams of 3 5 and collaborating with backend engineers, designers, and product managers to ship high-quality, scalable applications.

PROFESSIONAL EXPERIENCE

React Native Developer
December 2025 Present

Technology Architects

- Lead frontend development of 2 cross-platform mobile apps (Shagf App and Shagf Trainer) using React Native and Expo, currently live on Google Play and App Store with 2,000+ active users.
- Engineered a dynamic dual-theme UI system that switches color schemes and layouts between Fitness and Education modes in real time, improving user experience across 2 distinct user segments.
- Implemented real-time live tracking using Pusher (WebSocket) customers can track trainer/teacher location live; trainer app transmits GPS updates via expo-location.
- Integrated Maps API, Firebase Cloud Messaging for push notifications, and role-based API routing to serve distinct endpoints for Fitness and Education user flows.
- Applied role-based authentication supporting 2 user types (Fitness / Teacher) with separate navigation stacks and feature sets within a single codebase.
- Currently maintaining both apps on iOS (App Store) and Android (Google Play) handling bug fixes, performance issues, and OS-level compatibility updates.

React / React Native Developer
September 2024 Present

Devxcel Islamabad (Remote)

- Shipped 6 production applications Tallah Admin, Tallah Client, Tallah Web, KorpoAI, Yummy, and IFC Simulation as lead frontend developer in a team of 3 5, all currently live.
- Built 20 30 screens and 40+ reusable TypeScript components across projects, covering booking flows, dashboards, AI chat interfaces, 3D viewers, and real-time tracking UIs.
- Integrated RevenueCat for in-app subscription management (USD 10/month), OpenAI API for AI-powered features, Supabase as a backend service, and Firebase Cloud Functions for serverless logic.
- Implemented Thawani payment gateway, Firebase Cloud Messaging push notifications, and gift voucher / discount offer systems across the Tallah platform.
- Improved app startup time and scroll performance through memoisation, lazy loading, and FlatList optimisation measurably reducing UI jank and load times across multiple production apps.
- Currently maintaining KorpoAI on iOS App Store and Google Play, managing live bug fixes, OS compatibility, and feature iterations.

Front-End Developer Intern
June August 2023

Adan Institution of Technology Gujrat

- Built 5+ responsive web pages and a complete portfolio site using HTML5, CSS3, JavaScript, and PHP under senior developer mentorship.
- Participated in weekly code reviews, improving understanding of maintainable front-end architecture, cross-browser compatibility, and responsive design best practices.
- Gained foundational exposure to server-side development through PHP forms and MySQL queries within a LAMP stack environment.

PROJECTS

Shagf App — Fitness & Education Booking Platform — Dec 2025 – Present

Technology Architects — play.google.com/store/apps/details?id=sa.nawat.customer

- Architected and implemented a dynamic dual-theme UI system — distinct color schemes and layouts for Fitness and Education modes — with seamless runtime switching.
- Integrated Pusher (WebSocket) for real-time live trainer/teacher tracking, enabling customers to follow their assigned trainer on a live map.
- Integrated Maps API for location services, Firebase Cloud Messaging for push notifications, and role-specific REST API routing for Fitness and Education user flows.
- Currently live on Google Play and App Store; actively maintaining the app with ongoing bug fixes and OS-level updates.

Shagf Trainer — Trainer & Teacher App — Dec 2025 – Present

Technology Architects — play.google.com/store/apps/details?id=com.shagfapp.trainer

- Built the trainer-side companion app with role-based login supporting Fitness Trainer and Teacher user types, each with distinct navigation flows and API routes.
- Implemented real-time location broadcasting using expo-location and Pusher (WebSocket), transmitting live GPS updates to the customer app for live tracking.
- Delivered UI/UX improvements across the app and currently performing live maintenance including bug fixes and feature enhancements.

Tallah Client — Online Booking App for Beauty & Wellness — Jul 2025 – Present

Devxcel — play.google.com/store/apps/details?id=com.menasa.tallahClient

- Built from scratch — a full-featured booking app for barber, beauty, and spa shops; users browse shops, select services, choose available slots, and confirm bookings end to end.
- Integrated Thawani payment gateway for secure online payments, Firebase Cloud Functions as serverless backend, and Firebase Cloud Messaging for push notifications.
- Implemented gift vouchers, discount offers, and special package features to support promotional campaigns within the platform.

Tallah Admin — Shop & Super Admin Management Platform — Jul 2025 – Present

Devxcel — play.google.com/store/apps/details?id=com.menasa.tallahAdmin

- Built the admin-facing app for shop owners and Tallah super admins — create and manage shops, configure services, and control appointment statuses created by customers.
- Integrated Firebase Cloud Functions for serverless backend logic, mirroring the same architecture used in the Tallah Client app.

Tallah Web — Web Admin Dashboard — 2024 – Present

Devxcel

- Developed the web-based counterpart to Tallah Admin using React, providing shop owners and super admins a browser interface to manage shops, services, and appointments.
- Shared backend architecture (Firebase Cloud Functions) with the mobile apps, ensuring consistent data and business logic across web and mobile platforms.

KorpoAI — AI-Powered Health & Wellness App — Apr – Jul 2025

Devxcel — apps.apple.com/us/app/korpo-fitness-ai/id6753859639

- Built from scratch — a wellness app with dedicated tabs for Emotional, Physical, and Work health; onboards users with a lifestyle assessment then routes data to category-specific AI models.
- Integrated OpenAI API to power per-tab AI coaching (Emotion AI, Work AI, Physical AI), delivering personalised guidance based on each user's profile.
- Implemented RevenueCat for in-app subscription management (USD 10/month) across iOS and Android, handling purchase flows, entitlement checks, and receipt validation.
- Added diet plan management with native OS calendar integration, allowing users to schedule meals directly to their device calendar.
- Currently live on App Store and Google Play; actively maintaining with ongoing feature updates and bug fixes.

Yummy — Food & Lifestyle Social App — 2025

Devxcel

Developed UI for a social media app where users share daily food-related lifestyle posts, built with React Native and Supabase as the backend service.

IFC Simulation Viewer — 3D BIM Explorer — Sep 2024 – Jul 2025

Devxcel

Developed a browser-based 3D BIM viewer using That Open Library (web-ifc) and three.js for loading, rendering, and interacting with IFC building models in real time.

Built tools for element selection, property inspection, layer/component filtering, and construction phase simulation within a React application.

SkillBot — AI Interview Evaluator — May 2025

Personal Project *github.com/AHMADCHAD/skillbot*

Built an AI-powered quiz app where users select frameworks (React Native, React, JavaScript, etc.), take a dynamically generated quiz, and receive a scored result with improvement suggestions.

Integrated OpenAI API for context-aware question generation and result evaluation; Firebase Realtime Database for session persistence.

HITEC Universe — University Management App — Jan 2023 – Dec 2024

Personal Project · Final Year Project

Built a full-featured React Native university management app with Firebase backend, multi-role authentication (student, staff, admin), event booking, complaint tracking, and a complete admin panel.

Commended by faculty panel for technical completeness, real-world deployment quality, and UI polish.

EDUCATION

Bachelor of Science in Software Engineering — Sep 2021 – Jun 2025

HITEC University · Taxila, Pakistan · GPA: 3.45 / 4.00

Coursework: Data Structures & Algorithms, Operating Systems, Database Systems, Software Architecture, Web Engineering, Mobile Application Development.

Final Year Project commended by faculty panel for technical completeness and real-world deployment quality.

Participated in university coding competitions and collaborative software development workshops.

Intermediate (ICS) — Computer Science — Aug 2019 – Jun 2021

Superior Group of Colleges · Mandi Bahauddin, Pakistan

Core subjects: Programming Fundamentals, Mathematics, and Statistics.

TECHNICAL SKILLS

Languages	JavaScript (ES2022+), TypeScript
Frontend / Mobile	React Native, React, Expo, React Navigation, React Query, expo-location
Backend & Data	Firebase, Firestore, Firebase Auth, Cloud Functions, Supabase, Node.js, MongoDB, REST APIs
Real-time & Payments	Pusher (WebSocket), RevenueCat, Thawani Payment Gateway, Firebase Cloud Messaging
AI & Integrations	OpenAI API, WhatsApp Business API, Maps API
3D / Visualization	three.js, web-ifc, That Open Library, WebGL
Dev Tools	Git, GitHub, VS Code, Postman, Figma, Expo EAS, Google Play Console, App Store Connect
Practices	Agile / Scrum, Component-Driven Development, RBAC, CI/CD, Code Review
